PE Mesh Film

*Material: Reinforced PE Fabric With Grid/Laminated PE Mesh Film
*Color: Transparent
*Weight: 100GSM~300GSM
*Width: 2m 3m 4m

Features

- Reinforced PE Fabric With Grid, More Strong and Durable. Allows light to pass through while still providing covering. This makes it useful for applications like greenhouses where sunlight is needed.
- Waterproof - The PE coating prevents water from soaking through the fabric. This makes it ideal for uses like covering equipment, wrapped pallets, or creating temporary shelters.
- Tear resistant - The grid structure endows it with enhanced strength, enabling it to withstand external forces like wind and friction, and reducing the risk of tearing.
- Flexible - Can be folded or rolled up for easy transport and storage when not in use.
- Lightweight - Weighs less than other covering materials like canvas. This improves portability.
- UV and mildew resistant - Stands up well over time to ultraviolet rays and mold/mildew.

Application

- Protecting plants, equipment, supplies or work areas from rain and dust.
- Temporary structures like shelters, tent walls, flooring or storage rooms.
- Wrapping pallets or covering vehicles like cars, boats or trailers.
- Greenhouse roofing to allow in sunlight while keeping plants dry.
- Ground covers or drop cloths for painting, construction or events.
- Weather protection covers for scaffolding, lumber, or other building materials.
- Heavy-duty wrapping and Packaging
